

Where do I go?

CORN MAZE CONNECTION:
Seeing is believing. The MAiZE offers the perfect chance for students to see, touch, and feel corn in an actual field. That's an eye-opening experience for those who have not grown up around agriculture.

Label the parts of the corn plant from the list below. Did you know a corn plant has so much to it?

- ear or cob: protected by a husk of tightly wrapped leaves
- kernels: the plant's seeds and the part you eat
- roots: these go deep into the soil and take out the food and water the plant needs to grow
- silk: long soft threads at the top of the corn plant
- stalk: some kinds of corn have stalks as high as 31 feet
- tassel: the flower at the top of the plant

Answers: tassel, stalk, silk, kernels, silk, roots

Information was gathered with help from Utah's "Ag-in-the-Classroom" program. For more information contact www.ext.usu.edu/aitc
